

# ZBEdge<sup>®</sup> Analytics

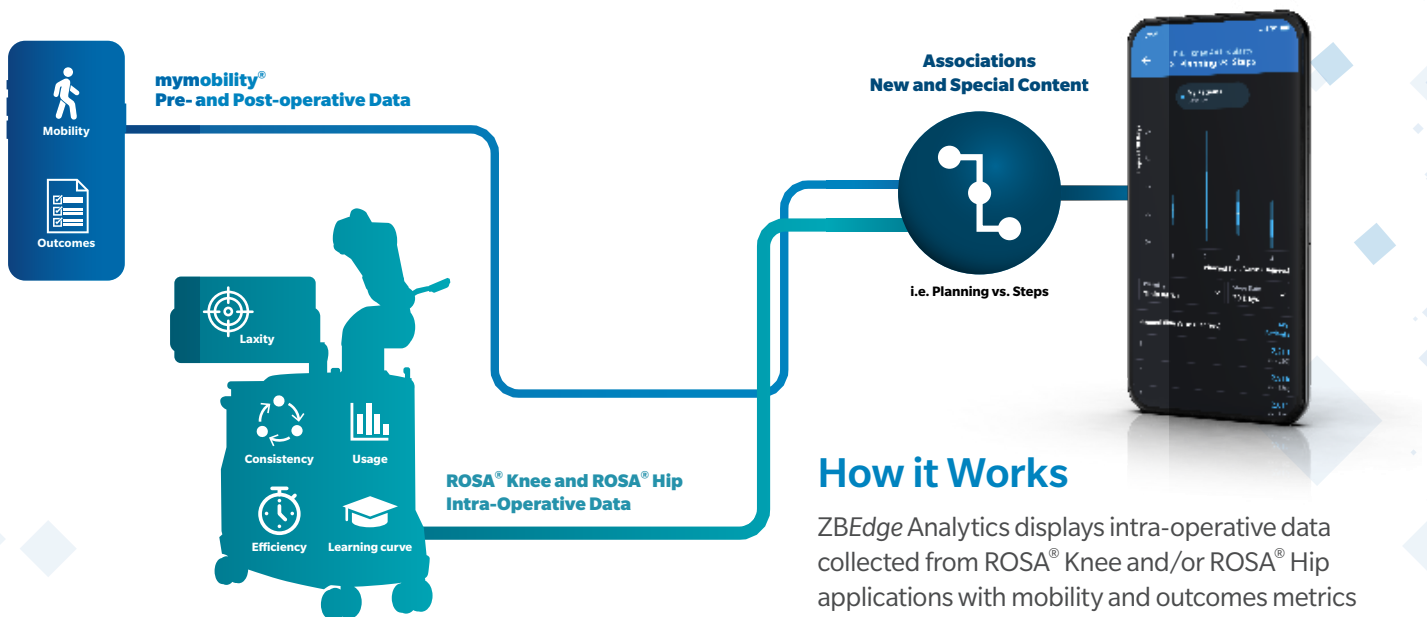

## Your Personalised Performance Data Experience

ZBEdge<sup>®</sup> Analytics is a data platform that delivers intra-operative, mobility and outcome insights directly on a smartphone, enabling surgeons to objectively assess their performance and understand the potential impact of intra-operative clinical decisions on patient recovery.

**Digital and robotic technologies are changing the course of orthopaedic surgery** with more precision, more accuracy and more reproducibility than traditional instrumentation<sup>1-3\*</sup>. And yet, it is still difficult to objectively relate decisions made in surgery, such as how tight you leave the medial and lateral gaps in flexion or extension and how that affects patient outcomes and satisfaction. All while patient conditions and expectations vary.

Now, with ZBEdge Analytics, you can connect insights together to learn, understand and identify potential areas to improve using your data.

## Connect

Analyse and compare the potential impact of surgical decisions on patient recovery using intra-operative data alongside mobility and outcomes metrics.

## Understand

Relevant insights are delivered in an effortless and actionable format through a personalised data experience.

## Improve

Monitor performance and benchmark progress to identify potential opportunities for improvement by uncovering new insights from data.

# Data Privacy

**At Zimmer Biomet, The Patient Is Always The Patient, And Never The Product.**

We accept the responsibility that comes along with the new age of data transformation and we are committed to protecting the patient's privacy.

Our dedicated teams of privacy professionals work to support Zimmer Biomet's data protection obligations, data management and use.
